EDUCATION

University of Toronto Scarborough

Toronto, ON

Honours Bachelor of Science (Co-op) in Computer Science

2024 – Present

- **Specialization:** Software Engineering
- **Relevant Coursework:** Software Design (CSCB07), Data Structures & Algorithms (CSCB63), Software Tools & Systems Programming (CSCB09)

PROJECTS

Music4You | *Next.js, TypeScript, PostgreSQL, Supabase* | Portfolio

Dec 2025 – Present

- Engineered a full-stack music review platform with authentication, protected routing, and persistent relational data storage using Supabase and PostgreSQL.
- Designed and normalized relational schemas across 4 core entities (users, albums, ratings, reviews).
- Architected RESTful API endpoints supporting CRUD operations across relational entities.

Argus | *Next.js, React, FastAPI, Gemini API, Firebase* | Devpost

Feb 2026

- Built a full-stack GovTech intelligence platform that analyzes startup descriptions and surfaces early-stage government opportunities using live signal ingestion.
- Implemented a hybrid matching approach combining Gemini-based semantic similarity with keyword filtering, with caching and file-based fallback to keep results available during API/data failures.
- Built a globe-based visualization UI in Three.js to explore matched opportunities, persisting pins and search state across sessions.

SmartAir | *Java, Android SDK, Firebase Firestore* | GitHub

Sep 2025 – Dec 2025

- Contributed to a multi-role Android asthma management application within a 5-person agile team, implementing patient-facing tracking workflows.
- Designed structured Firestore data models for timestamped symptom logging and daily health tracking across user roles.
- Implemented query-based filtering and multi-month history retrieval to support provider-facing data review and export functionality.

Ez Form | *FastAPI, React, TypeScript, Gemini API* | Devpost

Jan 2026

- Developed a voice-driven web application during a one-day hackathon to enable accessible, keyboard-free PDF form completion.
- Built a FastAPI backend to extract, track, and update PDF form fields using session-based multi-step workflows.
- Integrated Gemini API to convert spoken input into structured field updates, enabling dynamic form population through AI-assisted parsing.

EXPERIENCE

Data Entry Volunteer

2023 – 2025

Wellspring London & Region

London, ON

- Improved database accuracy by 35% by identifying and resolving data discrepancies within a 3-member team, supporting programs for cancer patients and families using Salesforce and Excel.

TECHNICAL SKILLS

Languages: TypeScript, Python, Java, JavaScript, SQL, HTML/CSS, C, C#

Frameworks: React, Next.js, FastAPI, Node.js, Android SDK

Databases: PostgreSQL, Firebase Firestore, Supabase

Tools: Git, GitHub, Linux, Jira, Jest, JUnit, VS Code

Concepts: Object-Oriented Programming, RESTful APIs, Software Design Principles, Agile Development

Other: Bilingual (English & French)

Technical Interests: Full-stack development, backend systems, mobile applications
