EDUCATION

University of Toronto Scarborough

Toronto, ON

Honours Bachelor of Science (Co-op) in Computer Science

2024 – Present

- **Specialization:** Software Engineering
- **Relevant Coursework:** Software Design, Data Structures & Algorithms, Software Tools & Systems Programming

PROJECTS

Music4You | *Next.js, TypeScript, PostgreSQL, Supabase* | GitHub

Dec 2025 – Present

- Building a Letterboxd-style social music review platform where users rate albums, write reviews, add friends, and maintain profiles.
- Designed a relational PostgreSQL schema across users, albums, ratings, and reviews with clear entity relationships.
- Implemented a provider-based backend architecture (service/repository interfaces) to decouple business logic from the database/auth stack, enabling easy swapping of providers.

Argus | *Next.js, React, FastAPI, Gemini API, Firebase* | Devpost

Feb 2026

- Built a GovTech intelligence tool where users input a startup description and receive ranked, pre-RFP government opportunity signals.
- Implemented a web discovery and content extraction workflow (Serper and Jina) to gather candidate sources and rank them against the startup description.
- Deployed on Vercel; added caching and file-based fallback for reliability, and built a Three.js globe UI to explore matched opportunities.

SmartAir | *Java, Android SDK, Firebase Firestore* | GitHub

Sep 2025 – Dec 2025

- Worked on a 5-person agile team building a gamified asthma support app for children to log symptoms/medication and track health trends.
- Built role-based functionality for patient/parent/provider users, including secure parent-to-provider data sharing flows.
- Designed Firestore collections for timestamped logs and implemented query-based filtering and ordering for multi-month history views.

Ez Form | *FastAPI, React, TypeScript, Gemini API* | Devpost

Jan 2026

- Built a voice-driven web app to enable accessible, keyboard-free PDF form completion.
- Built a FastAPI backend to extract, track, and update PDF form fields using session-based multi-step workflows.
- Integrated Gemini API to convert spoken input into structured field updates, enabling dynamic form population through AI-assisted parsing.

EXPERIENCE

Data Entry Volunteer

2023 – 2025

Wellspring London & Region

London, ON

- Improved database accuracy by 35% by auditing Salesforce records, resolving discrepancies and duplicate entries, and standardizing data in Excel within a 3-member team.
- Collaborated with staff and volunteers to maintain consistent data entry practices, supporting reliable program reporting and client follow-ups.

TECHNICAL SKILLS

Languages: TypeScript, Python, Java, JavaScript, SQL, HTML/CSS, C, C#

Frameworks: React, Next.js, FastAPI, Node.js, Android SDK

Databases: PostgreSQL, Firebase Firestore, Supabase

Tools: Git, GitHub, Linux, Vercel, Jira, Jest, JUnit, VS Code

Concepts: Object-Oriented Programming, RESTful APIs, Software Design Principles, Agile Development

Other: Bilingual (English & French)

Technical Interests: Full-stack development, backend systems, mobile applications
